Exponential Generating Functions Definition, Product Formula and Application on Stirling Numbers of the Second Kind

Jianing Yang Grade 12, International School of Zug and Luzern

Menotor: Kaloyan Slavov, Primes Switzerland

・・

• Let $f_{n \ n \ge 0}$ be a sequence of real numbers, then its exponential generating function takes the form $F(x) = \sum_{n \ge 0} f_n \frac{x^n}{n!}$.

• Let $f_{n} \ge 0$ be a sequence of real numbers, then its exponential generating function takes the form $F(x) = \sum_{n \ge 0} f_n \frac{x^n}{n!}$.

When $f_n = 1$, $F(x) = \sum_{n \ge 0} \frac{x^n}{n!} = e^x$.

Let A(x), B(x), and C(x) be the exponential generating functions of the sequences a_n, b_n and c_n, respectively. Then it follows from previously that

A(x)B(x) = C(x).

Application on Stirling Numbers of the Second Kind

Stirling numbers of the second kind, S(n, k) describes the number of partitions of n elements into k nonempty, non-ordered subsets, where k is a fixed positive integer.

・ロト・日本・モート ヨー うへぐ

Application on Stirling Numbers of the Second Kind

• Let $S_k(x) = \sum_{n \ge k} S(n,k) \frac{x^n}{n!}$ be the exponential generating function of S(n,k).

Application on Stirling Numbers of the Second Kind

• Let $S_k(x) = \sum_{n \ge k} S(n,k) \frac{x^n}{n!}$ be the exponential generating function of S(n,k).

S(n,k) requires a partition of n elements into k nonempty disjoint subsets, and nothing is to be done on each subset.

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ うへで

Application on Stirling Numbers of the Second Kind

• Let $S_k(x) = \sum_{n \ge k} S(n, k) \frac{x^n}{n!}$ be the exponential generating function of S(n, k).

S(n,k) requires a partition of n elements into k nonempty disjoint subsets, and nothing is to be done on each subset.

As there is one way to do nothing on a nonempty subset, each task has exponential generating function

$$A(x) = \sum_{n \ge 1} \frac{x^n}{n!} = e^x - 1.$$

◆□▶ ◆□▶ ◆ ≧▶ ◆ ≧ ● ● ● ● ● ●

Application on Stirling Numbers of the Second Kind

Using the product formula, we obtain the generating function (A(x))^k for the combined task of partitioning n elements into k ordered subsets.

・ロト・4回ト・4回ト・目 うへで

Application on Stirling Numbers of the Second Kind

Using the product formula, we obtain the generating function (A(x))^k for the combined task of partitioning n elements into k ordered subsets.

But as the order does not matter, our task has generating function

$$S_k(x) = \frac{1}{k!} (A(x))^k = \frac{1}{k!} (e^x - 1)^k.$$

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ うへぐ

Application on Stirling Numbers of the Second Kind

► To obtain an explicit formula for S(n, k), we need to find the coefficient of ^{xⁿ}/_{n!} in S_k(x).

・・

The Catalan Numbers

Definition, Example, and the Generating Function of the Catalan Numbers

Jingling Ding Grade 11, Kantonsschule Zug Mentor: Kaloyan Slavov

Menotor: Kaloyan Slavov, Primes Switzerland

Catalan numbers form a sequence of natural numbers that occur in various counting problems.

・ロット 中国・ 中国・ 中国・ 今日・

The Catalan Numbers Example

A student moves into a new room and upon his arrival, he puts an empty jar on his kitchen counter. From then on, every day he either puts a dollar coin in the jar, or takes a dollar coin out of the jar. After 2n days, the jar is empty again. In how many different ways could this happen?

◆□▶ ◆□▶ ◆三▶ ◆三▶ ◆□ ● のへで

• Let p = put in a coin = +1, t = take out a coin = -1

► The sequence must start with a p and end with a t, and the sum of the terms from day 0 to day j, 0 ≤ j ≤ 2n must never be negative.

The Catalan Numbers

Example

- ▶ n = 0...... 2n = 0 Ways: 1
- ▶ n = 1...... 2n = 2 Ways: 1 (pt)
- ▶ n = 2...... 2n = 4 Ways: 2 (ptpt, pptt)
- n = 3...... 2n = 6 Ways: 5 (ptptpt, ppttpt, ptpptt, pppttt)
- ▶ ...
- Let c_n be the number of ways to put in or take out coins for 2n days, then we have

 $c_0 = 1$, $c_1 = 1$, $c_2 = 2$, $c_3 = 5$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ▶ ▲□ ▶ ▲□

The Catalan Numbers Example

• A sequence of length 2n:

 $p.....1....t_a....2.....$

Let t_a be on the $(2i+2)^{th}$ day that the jar is empty again for the first time,

1: a sequence of length $2i, \ 0 \leq i \leq n-1$ 2: a sequence of length 2n-2i-2

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶

Example

 $p.....1....t_a....2.....$

Sequences 1 and 2 both have to start with a p and end with a t, and are never negative,

- 1: a sequence of length 2i, $0 \le i \le n-1$, c_i ways
- 2: a sequence of length 2n-2i-2, c_{n-i-1} ways, for $0 \le i \le n-1$

Then we have $c_n = \sum_{i=0}^{n-1} c_i c_{n-i-1}$.

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Example

 $c_n = \sum_{i=0}^{n-1} c_i c_{n-i-1}$

For n = 4, 2n = 8 days, we obtain $c_4 = \sum_{i=0}^{3} c_i c_{3-i} = 14$.

We can check this by listing the ways in order of i, where sequence 1 corresponding to c_i is **bold** and sequence 2 corresponding to c_{n-i-1} is <u>underlined</u>:

$$i = 0$$
: pt_apppttt, pt_apptptt, pt_apptpt, pt_aptppt, pt_aptppt, pt_aptpt, pt_aptpt

- i = 1: p**pt**t_apptt, p**pt**t_aptpt
- i = 2: p**pptt**t_apt, p**ptpt**t_apt
- i = 3: pppptttt_a, pptppttt_a, ppptpttt_a, pptptptt_a, ppptptt_a, ppptptt_a

Finding the Generating Function

 $C(x) = 1 + c_1 x + c_2 x^2 + \dots$ $xC(x)^2 = c_1 x + c_2 x^2 + c_3 x^3 + \dots$

Finding the Generating Function

$$xC(x)^2 = C(x) - 1$$

 $xC(x)^2 - C(x) + 1 = 0$

・ロ・・ 白・・ キャ・ キャー ヨー うくぐ

Finding the Generating Function

$$C(x)_{1} = \frac{1 + \sqrt{1 - 4x}}{2x}$$
$$C(x)_{2} = \frac{1 - \sqrt{1 - 4x}}{2x}$$

・ロ・・ 白・・ キャー・ キー うくぐ

Finding the Generating Function

Recall:

 $\sqrt{1-4x}$ is the unique power series whose square is 1-4x and whose constant coefficient is 1.

By using the binomial thereom,

$$(1+x)^m = \sum_{n \ge 0} \binom{m}{n} x^n,$$

then

$$\sqrt{1-4x} = (1-4x)^{\frac{1}{2}} = \sum_{n\geq 0} {\binom{\frac{1}{2}}{n}} (-4x)^n.$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□

Finding the Generating Function

$$\sqrt{1-4x} = (1-4x)^{\frac{1}{2}} = \sum_{n \ge 0} {\binom{\frac{1}{2}}{n}} (-4x)^n$$

To simplify this expression,

$$\binom{\frac{1}{2}}{n} = \frac{\frac{1}{2} \cdot \frac{-1}{2} \cdot \frac{-3}{2} \dots \frac{-2n+3}{2}}{n!} = (-1)^{n-1} \frac{(2n-3)!!}{2^n \cdot n!},$$

then we have

$$\sqrt{1-4x} = 1 - 2x - \sum_{n \ge 2} \frac{2^n (2n-3)!!}{2^n \cdot n!} x^n.$$

・ロ・・ 白・・ キャ・ キャー ゆくぐ

Finding the Generating Function

$$\sqrt{1-4x} = 1 - 2x - \sum_{n \ge 2} \frac{2^n (2n-3)!!}{2^n \cdot n!} x^n,$$

 $\quad \text{and} \quad$

$$\frac{2^n(2n-3)!!}{n!} = \frac{2^n(2n-3)!!}{n!} \cdot \frac{(n-1)!}{(n-1)!} = 2\frac{(2n-2)!}{n!(n-1)!},$$

then

$$\sqrt{1-4x} = 1 - 2x - 2\sum_{n \ge 2} \frac{1}{n} \binom{2n-2}{n-1} x^n.$$

・ロ・・ 白・・ キャ・ キャー キー うへぐ

Finding the Generating Function

Going back to the two solutions of the quadratic equation, substituting

$$\sqrt{1-4x} = 1 - 2x - 2\sum_{n \ge 2} \frac{1}{n} \binom{2n-2}{n-1} x^n$$

into them, we obtain

$$C(x)_1 = \frac{1+1-2x-2\sum_{n\geq 2}\frac{1}{n}\binom{2n-2}{n-1}x^n}{2x}$$

 and

$$C(x)_{2} = \frac{1 - 1 + 2x + 2\sum_{n \ge 2} \frac{1}{n} \binom{2n-2}{n-1} x^{n}}{2x}$$

•

Finding the Generating Function

Taking the valid solution $C(x)_2$, we have

$$C(x) = \frac{2x + 2\sum_{n\geq 2} \frac{1}{n} \binom{2n-2}{n-1} x^n}{2x}$$
$$= 1 + \sum_{n\geq 2} \frac{1}{n} \binom{2n-2}{n-1} x^{n-1}$$
$$= 1 + \sum_{n\geq 1} \frac{1}{n+1} \binom{2n}{n} x^n$$
$$= \sum_{n\geq 0} \frac{1}{n+1} \binom{2n}{n} x^n.$$

$$\sum_{n\geq 0} a_n x^n = \left(\frac{x^m}{(1-x)^{m+1}}\right) \left(\frac{1-\sqrt{1+\frac{4x}{(1-x)^2}}}{\frac{-2x}{(1-x)^2}}\right)$$
$$\sum_{n\geq 0} a_n x^n = \left(\frac{-x^{m-1}}{2(1-x)^{m-1}}\right) \left(1-\sqrt{1+\frac{4x}{(1-x)^2}}\right)$$
$$\sum_{n\geq 0} a_n x^n = \left(\frac{-x^{m-1}}{2(1-x)^{m-1}}\right) \left(1-\frac{1+x}{1-x}\right)$$
$$\sum_{n\geq 0} a_n x^n = \frac{x^m}{(1-x)^m}$$

The Solution Part 4

$$\sum_{n\geq 0} a_n x^n = \left(\frac{x^m}{(1-x)^{m+1}}\right) \left(\frac{1-\sqrt{1+\frac{4x}{(1-x)^2}}}{\frac{-2x}{(1-x)^2}}\right)$$
$$\sum_{n\geq 0} a_n x^n = \left(\frac{-x^{m-1}}{2(1-x)^{m-1}}\right) \left(1-\sqrt{1+\frac{4x}{(1-x)^2}}\right)$$
$$\sum_{n\geq 0} a_n x^n = \left(\frac{-x^{m-1}}{2(1-x)^{m-1}}\right) \left(1-\frac{1+x}{1-x}\right)$$
$$\sum_{n\geq 0} a_n x^n = \frac{x^m}{(1-x)^m}$$
$$a_n = \binom{n-1}{m-1} = \sum_{k\geq 0} \binom{n+k}{m+2k} \binom{2k}{k} \frac{(-1)^k}{k+1}$$

Background On Final step

$$\blacktriangleright \sum_{n\geq 0}^{\infty} x^n = \frac{1}{1-x}$$
