Topology Seminar

Arpon Raksit

of MIT will be speaking on

The Even Filtration

on September 26 at 4:30 in
MIT Room 2-131

This talk will be about joint work with Jeremy Hahn and Dylan Wilson in which we define a filtration on an arbitrary commutative ring spectrum that we call the "even filtration". I'll introduce the definition, the one method we've come up with for analyzing it, and its relation to other filtrations of interest, in particular motivic filtrations on topological Hochschild homology.
